

decionis **Steward**

PREPARED FOR RUIAN OFFICES

Make every visit count.

Merchant growth & customer experience

Help people choose well, stay connected and enjoy better service. Give merchants the tools to respond with useful, consistent content.

01 / CHOOSE

**Personalized
decisions**

02 / RETURN

**Ongoing
relationships**

03 / CREATE

**Consistent
brand content**

04 / SERVE

**Better
touchpoints**

TRY THE LIVE EXPERIENCE

steward-ruian-preview.vercel.app

Explore four live AI experiences using fictional merchant data. Then scope a twelve-week pilot with two real merchants.

Decionis, Inc. | Festus .B. Jejelowo | 7 October 2026

THE RECOMMENDED FOUNDATION

Why Steward fits this opportunity

Ruian's brief is about relationships and service. Steward provides a relevant staff workflow around which to build the merchant experience.

OUR RECOMMENDATION

Lead with Decionis Steward. Consider Commerce Gate later for supported promotion, discount or refund controls.

EXISTING FOUNDATION

- Staff dashboard, customer context and source-health views.
- An evidence-backed queue with approve, hold and reject reviews.
- Support planning by region and segment, plus a decision timeline.
- Validated APIs and a signal-connector framework.

INCLUDED IN THE PREVIEW

- Ask the live agent for sample lunch, gift and experience suggestions.
- Generate three follow-up drafts using fictional customer consent.
- Create captions, video scripts and square or portrait graphic drafts.
- Get service answers and create a local demo staff handoff.

FROM PREVIEW TO PILOT

The separate preview demonstrates all four directions with a live AI agent and sample merchant guides. A real pilot still requires approved merchant feeds, consent records, operating channels, staff routing and outcome measurement.

The preview is prepared for review. No live Ruian merchant or customer system is connected. Purchases, bookings, messages and staff notifications are not executed.

DIRECTIONS 01 + 02

Help people choose. Give them a reason to return.

01 / PERSONALIZED CONSUMPTION DECISIONS

A useful shortlist, at the moment of need

A visitor shares a need, time constraint or budget. A QR/mobile-web assistant suggests a short, explained selection from approved merchant catalogues and links to the right product, service or booking destination.

- **Deliver:** one assistant surface; a catalogue/FAQ set per merchant; preference prompts; source-linked options; event tracking and staff handoff.
- **Experience:** guest access; no profile required. Show price and availability only when the source is current; ask staff when facts are missing.

Measure: qualified next-step rate and time to a useful choice. Report clicks, bookings and verified purchases separately.

02 / INTERACTION AND REPEAT PURCHASE

A relevant invitation after the first visit

Invite customers to opt in to a merchant's existing membership or contact channel. Staff review a useful post-visit message and a relevant return or event/community invitation, using permitted interests and purchase history.

- **Deliver:** two journeys per merchant: post-visit support and a return/event invitation. Include consent, frequency limits, opt-out and staff approval.
- **Experience:** export to one agreed channel per merchant. Membership terms remain merchant-owned; a new points engine or community platform is outside scope.

Measure: 30-day repeat purchase for observable, opted-in cohorts, plus opt-ins, opt-outs and complaints. A repeat click is not a repeat purchase.

DIRECTIONS 03 + 04

Create consistently. Make service moments useful.

03 / BRAND CONTENT PRODUCTION

One approved brief, a coordinated content pack

Use each merchant's voice, product facts, assets and offer terms to produce a weekly plan, copy options, a branded graphic draft and a short-video script/storyboard. Staff approve and export the pack before publication.

- **Deliver:** one brand kit per merchant; weekly packs during live pilot; two graphic aspect ratios; one video-script template; copy for two selected channels.
- **Experience:** approved model services and licensed merchant assets. Filming, edited video production and automatic publishing are outside scope.

Measure: staff minutes per approved content pack and first-pass brand acceptance, including editing and rework.

04 / IN-STORE EXPERIENCE AND SERVICE

Help while waiting. Hand over with context.

Place the assistant at one service touchpoint per merchant. Visitors can explore suitable options, ask practical questions, see approved directions and request a staff handoff without repeating the conversation.

- **Deliver:** two QR touchpoints; consultation/FAQ flow; merchant-supplied guidance; staff escalation; feedback and unresolved-request tracking.
- **Experience:** wait times appear only with a verified source. Existing queue, booking and POS systems remain the operating systems of record.

Measure: time to a useful answer or accepted handoff, unresolved requests and satisfaction. Track handoffs separately from resolved enquiries.

THE PROPOSED OPERATING MODEL

One connected customer journey

A customer surface and a staff workspace share approved facts. Each merchant stays in control of its customer relationships.

CONNECT APPROVED MERCHANT INFORMATION

For a live pilot, approved catalogues, FAQs, brand assets and consented events provide the shared facts. Adapt the preview for real merchant information and an agreed model service. Customers receive useful answers; staff review content, messages and requests.

The pilot includes **two data-feed types**: catalogue/service information and consented member/transaction events. Start with secure exports where appropriate. Confirm source access, quality and ownership before committing to direct system integrations.

CONTROLS THAT SUPPORT A USEFUL EXPERIENCE

- **Permission:** guest advice needs no account; remembered preferences and follow-up require opt-in and an easy opt-out.
- **Merchant separation:** identifiable customer data stays per merchant. Ruian receives agreed aggregates; public catalogues can support cross-merchant discovery.
- **Staff ownership:** merchants approve content and outbound campaigns. Missing or stale facts route to staff; affected journeys can be switched off.
- **Deployment:** agree hosting, models, permissions and retention before launch. New customer data is not assumed to belong in Steward's existing record store.

Actions that require policy evaluation or execution go to Decionis or an agreed authorized backend. The pilot adds no automatic price changes, refunds or publication.

SCOPE AND DELIVERY

A focused twelve-week pilot

Start with two merchants at one location. Prove the shared workflow before expanding channels, languages or integrations.

PLANNING SCOPE

One pilot language. One customer web surface. One adapted staff console. Two data-feed types. One existing follow-up channel per merchant.

01

WEEKS 1-2

Discover and baseline

Confirm sources, brands, journeys and permissions. Agree scope, budget, acceptance criteria and the comparison plan.

02

WEEKS 3-6

Build and configure

Adapt the preview, connect merchant feeds and implement real staff handoff and review. Complete content, data and consent checks.

03

WEEKS 7-8

Launch with control

Train staff and launch at the two touchpoints. Inspect answer quality and customer use before increasing exposure.

04

WEEKS 9-12

Measure and decide

Improve the workflows, compare outcomes and costs, and deliver the playbook and pilot report. Stop, revise or expand.

Week-2 gate: if catalogue quality, consent, source access or a staffed handoff is missing, narrow or reschedule the dependent workflow before building it.

Timing is a planning estimate, subject to a staffed team, access and approvals. The week-12 report covers mature 30-day purchaser cohorts; later cohorts receive an agreed follow-up report.

EVALUATION AND EXPANSION

Measure what changes

Agree numerical targets after the baseline, before customer exposure. These are proposed measures, not claims of delivered performance.

Direction	Primary measure	Interpretation
01 / Choice	Sessions completing an agreed next step / eligible assistance sessions.	Separate clicks, bookings and verified purchases.
02 / Return	Customers buying again in 30 days / observable first purchasers in the cohort.	Use mature cohorts and disclose purchase-data coverage.
03 / Content	Median staff minutes from brief to approved content pack.	Include rework; track first-pass brand acceptance.
04 / Service	Median time to a useful answer or accepted staff handoff.	Report resolution, handoff and unresolved rates separately.

MAKE THE COMPARISON CREDIBLE

Use a two-week baseline and, where traffic permits, a comparable holdout or staggered rollout. Report sample size, merchant mix, seasonality and attribution gaps. If purchase linkage is unavailable, report engagement and service results without claiming sales or repeat-purchase uplift.

Weekly checks cover factual accuracy, opt-outs/complaints, staff adoption and cost per assisted session or approved pack. Serious quality or consent failures pause the affected journey. Small or incomplete samples are labelled inconclusive.

PARTNERSHIP AND NEXT STEP

Explore the preview. Shape the pilot together.

Ruian Offices

Nominate the location and two merchants. Coordinate access and approvals, name an operating sponsor and agree aggregate reporting.

Participating merchants

Maintain catalogue/FAQ facts and assets. Authorize eligible data and channels, staff the handoff and approve messages and content.

Decionis

Lead discovery, adapt Steward, build scoped services and feeds, configure models, train users and deliver measurement and handover.

COMMERCIAL SCOPE

A statement of work will separate implementation, hosting/model usage, support and any paid Decionis execution services. No fixed fee or SLA is quoted before discovery. Hardware, paid media, new loyalty infrastructure, extra languages and additional integrations require separate scope.

LIVE PREVIEW / THEN A SCOPING WORKSHOP

Open the Steward experience

Try discovery, a consented journey, a content pack and a demo handoff. Then use a 60-minute workshop to agree real data, channels, owners, measures and budget.
